CUT THE GREASE

Greasy locks can actually be helped by NOT washing your hair so much, says Daniel. Over-cleansing strips the natural oils, making your scalp go into overdrive to produce more as a replacement. "Swap your regular shampoo for one tailored to oily hair types, so it can gently cleanse without over stimulating the sebaceous glands," he says. "I also love using salt sprays on oily scalps, as they absorb some of the excess oils."

FIGHT

FLAT HAIR

If lack of volume is your number one nemesis, it's time you invested in some root boosting must-haves to take your hair from drab to fab! Daniel says, apply a root booster to towel-dried hair first, and then blowdry it, flipping your hair upside down for added height. "For instant volume with a soft, touchable feel, try applying a hair dust to the roots where needed," he says. "This acts like you've backcombed your hair – without the need to backcomb!"
